

Christian Nogueras Rosado

Full-Stack Software Engineer

Toa Alta, PR (GMT-4) · 787-447-9286 · christiannogueras94@gmail.com
<https://www.linkedin.com/in/christian-nogueras/> · <https://github.com/Kiri23>

Full-stack engineer with **6+ years** shipping UI and API end-to-end: React and TypeScript front ends, Python and Node back ends on AWS. At Snappt I scaled fraud detection from **0 to 2,500 daily users**; at Company Sage I migrated a platform from Django and Vue to Nest and Next. Most recently at Akcelita I built an **AI benchmark** that scores LLM prompt versions, and MCP tooling that lets **AI agents generate and verify production artifacts**.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, C#, Elixir
- **Web:** React, HTML5, CSS, Tailwind, Material UI, REST APIs, responsive design
- **Backend:** Node.js, NestJS, Flask, Django, Celery
- **Data:** PostgreSQL, MongoDB, ETL pipelines, schema migration
- **AI & APIs:** OpenAI SDK, Anthropic SDK, Google Gemini SDK, MCP, Claude Code
- **Cloud & Testing:** AWS (EC2, Fargate, ECR), Docker, GitHub Actions, Jest, Playwright

PROFESSIONAL EXPERIENCE

Akcelita – Software Engineer · Remote · 2024 – 2026

Modern workflow-automation and entity-driven platform used across multiple enterprise clients.

- Built a **self-describing MCP server** that exposes an existing workflow-automation platform to AI agents as tools, so an agent can generate schemas, forms, and workflows from natural language and get structured validation back.
- Built an **AI benchmark** to test its prompts as I built it: a hermetic agent runs the same task under each prompt version, a deterministic scorer grades the output, and a leaderboard shows which version wins. **30+ experiments**, plus end-to-end verification driving the real app with Playwright.
- Ran a **provider spike** across Gemini, OpenAI, and Claude on extracting energy-consumption data from utility bill images, reporting feasibility and **per-document cost** so the client could decide.
- Extended the platform's **visual builders for Actions and Forms**, letting non-technical users create automation through a Blockly-style interface.

Tech stack: React, Node.js, C#, .NET, Python, Postgres, Playwright, MCP

Company Sage – Software Engineer · San Juan, PR · 2023 – 2024

Comprehensive business-formation and compliance-management platform for small businesses.

- Migrated a complex business-formation platform from Django, React, and Vue.js to Nest.js and Next.js, rebuilding the front end and the API layer while the product stayed in use.
- Streamlined regulatory-compliance tracking by automating the processing of **millions of Wyoming IRS records**, engineering a scalable **Node.js ETL** to overcome memory constraints and laying the groundwork for multi-state expansion.

Tech stack: React, Vue.js, Node.js, Django, Flask, Celery, Postgres, AWS, Heroku, GitHub Actions, CI/CD, S3

Optic Power (Snappt) – Software Engineer · Remote · 2019 – 2023

Snappt: AI-powered tenant-screening platform to combat fraud and reduce evictions.

- Designed and scaled advanced **fraud-detection** features with image-processing algorithms in Node.js, driving user growth from **0 to 2,500 daily** and supporting **\$100M Series A** funding.
- Implemented CI/CD pipelines and leveraged AWS (EC2, Fargate, ECR), achieving a **50% reduction in operational costs** through cloud migration.
- Learned **Elixir** on the job, migrating API endpoints from Node.js to Elixir and maintaining dual production environments, picking up a new language and ecosystem while shipping to production.

Tech stack: React, JavaScript, Node.js, Elixir, MongoDB, PostgreSQL, AWS, GitHub Actions, SNS, SQS

KPG – Software Programmer, Internship · Guaynabo, PR · 2016 – 2017

Xiloh LMS.

- Integrated video conferencing into the Xiloh learning platform using **C# and ASP.NET**, including API evaluation, implementation, and technical documentation.

SIDE PROJECTS

- **Agentic Finance Review** – Multi-agent pipeline built with Claude Code that processes bank transaction CSVs through specialized agents, each with self-validation hooks that catch and correct errors autonomously. *(Python, Claude Code agents/hooks/skills)*
- **Claude Code Skills & Agent Tooling** – Reusable AI agent tools that automate daily development workflows: ticket tracking, missing-requirement detection. *(Claude Code, Skills)*
- **Video Dubbing Pipeline** – Built from scratch: downloads videos, transcribes with OpenAI Whisper, generates translated speech with ElevenLabs, and produces the final dubbed video, orchestrating multiple AI services end-to-end. *(Node.js, Whisper, ElevenLabs, ffmpeg)*

EDUCATION

B.S. Computer Science, 2019 – University of Puerto Rico, Bayamón, PR
